Titles of papers are given in italics. To facilitate reference, the number of each Part is indicated in bold

A Medium for Isolation and Cultivation of Hevea Latex Bacteria **5** 285
Abraham, P.D. **5** 291
Actidione:
effect of on bacteria **4** 174
effect of on moulds **4** 174
use of to control mould contaminants in latex **4** 173
Agrobacterium sp. **5** 285
Alignment of Anatomical Elements in the Stem of Hevea brasiliensis **2** 91
Ammonium sulphate **5** 218, 274, 275, 276, 277, 278
Andropogon **3** 128
Axonopus compressus **3** 117, 121, 122, 126

Bacillus sp. **4** 173
Bacillus subtilis **5** 285
Bark:
analyses of **2** 101, 103
changes in dimensions **1** 36
consumption of **2** 96, 97
contractions in relation to latex flow **1** 40, 41
local changes in dimensions **1** 36
levels of carbohydrates nitrogen and protein nitrogen **2** 100, 102, 103
measuring contraction of **1** 39
Barlow, Colin **1** 44
Beetles:
ambrosia **1** 2
buprestidae **1** 2
cerambycidae **1** 2
elateridae **1** 2
endomychid **1** 2
erotylid **1** 2
lamiidae **1** 2
platypodidae **1** 2
scolytidae **1** 2
tenebrionidae **1** 2
Bolton, J. **5** 274
Borax **5** 224
Bordeaux mixture **2** 106, 107, 108, 109
Bordeaux mixture:
foliage spraying with **2** 107,108
trunk spraying with **2** 106, 107
Borers (*see under* specific names)
Boron **5** 219
Bostrychidae **1** 2
Boutlea **3** 128

Bromoethane (ethyl bromide) **5** 298, 300, 301
Brookfield viscometer **3** 147, 148, 149, 150
Brown bast **2** 100; **5** 302
Buddings:
growth of **3** 144

Calcium **5** 224
Calopogonium mucunoides **1** 2
Castor oil **2** 65, 66
Centrosema pubescens **1** 2; **3** 117, 119, 122
Chandapillai, M.M. **3** 117
Chen Khyun Thai **2** 91
Chua, S.E. **2** 100
Citrus sp. **3** 144
Clonal seedlings:
Tjir 1 **5** 224
Clones:
angles of deviation of some **2** 95
leaf weight and leaf area ratios of RRIM 501 **3** 140, 141
leaf weight and leaf area ratios of RRIM 513 **3** 140, 141
net assimilation rate of RRIM 501 **3** 140, 141
net assimilation rate of RRIM 513 **3** 140, 141, 142, 144
AVROS 49 **2** 94, 95
AVROS 50 **1** 44; **2** 94, 95
AVROS 152 **2** 93, 94, 95
BD 5 **2** 93, 94, 95
PB 23 **2** 94, 95
PB 86 **2** 80, 81, 85, 86, 87, 89
PB 186 **2** 93, 94, 95
Pil A 44 **2** 93, 94, 95, 96, 97
Pil B 84 **2** 93, 94, 95, 96, 97
PR 107 **2** 80, 81, 82, 83, 84, 85, 86, 87
RRIM 501 **2** 93, 94, 95, 96, 97; **3** 136, 137, 139, 140, 141, 142, 143, 145
RRIM 501 growth studies **3** 136–145
RRIM 513 **2** 95; **3** 136, 137, 139, 140, 141, 142, 143, 145
RRIM 513 growth studies **3** 136–145
RRIM 519 **2** 94, 95
RRIM 526 **2** 96; **4** 188
RRIM 527 **2** 95, 97
RRIM 600 **2** 95
RRIM 603 **2** 95
RRIM 605 **2** 80, 81, 84, 85, 86, 87, 95
RRIM 607 **2** 95
RRIM 612 **2** 95
RRIM 614 **2** 94, 95
RRIM 616 **2** 94, 95, 97
RRIM 619 **2** 95, 97
RRIM 623 **2** 95

RRIM 625 **2** 95
RRIM 627 **2** 95
RRIM 628 **2** 95
Tjir 1 **1** 23; **2** 93, 94, 95, 96, 97
Colonisation:
by fungus and insects **1** 2
Concentrated rubber solutions:
degradation by:
mastication **3** 147, 148, 149, 150
sunlight **3** 147, 148, 149, 150
flow behaviour **3** 147
viscosity measurements **3** 147
Contamination of Field Latex and Solid Rubber by Copper Fungicides **2** 106
Copper:
analytical methods for **5** 219
contamination of field latex **2** 100–116
contamination of solid rubber **2** 100–116
content of after bordeaux mixture spraying of forks of mature trees **2** 107
deleterious effect of **2** 106
effect of on seedlings **5** 220, 221, 222, 224
effect on PRI **2** 108
relation between PRI and copper content **2** 110, 111
Corticium Salmonicolor Berk. et Br. (*see under* pink disease)
Corynebacterium sp. **5** 285
Covariance analysis:
discussion on **3** 131
girth as a calibrating variate **3** 130
improvements on field experiments **3** 113
methods **3** 130
pre- and post-treatment details **3** 133, 134
yield as calibrating variate **3** 134
Covers (*see also under* names of species):
effect of legumes **1** 1; **3** 117
legume under mature rubber **3** 128
root systems of **3** 117–128
Cuplump **2** 106, 107, 109, 110, 111
Cuplump for Heveacrumb **2** 66
Cyclohexylamine acetate **1** 28

Daldinia concentrica **1** 2
Decay of Rubber Wood in a Replanting and its Effect on Root Disease **1** 1
Determination of Osmolarity of Small Latex Samples by Vapour Pressure Osmometer **1** 23
Dieldrin **1** 1
Dry trees **2** 100, 103; **5** 302

Edwin, E.E. **4** 187
Effect of Density of Planting on the Growth, Yield and Economic Exploitation of Hevea brasiliensis Part II. The Effect on Profit **1** 44

Effect of Production Procedures on Properties of PA 80 Rubber **5** 257
Effect of Pumping on the Properties of High Ammonia Natural Rubber Latex Concentrates **3** 152
Effects of Trace Elements on Hevea brasiliensis Seedlings Grown in the Nursery **5** 217
Elaeis guineensis **3** 136, 144
Ethylene oxide **5** 291, 297, 302, 303

Fertilisers (*see also* manuring, plant nutrients and *under* specific elements):
effect of on pH of soils **5** 281
efficient use of **5** 282, 283
general effects of **5** 274, 283
leaching of:
anions **5** 276, 277
cations **5** 277, 278
recovery of anions and cations **5** 282
relationship of major and micro nutrients **5** 217
usefulness of calibration in trials **3** 130
Ficus elastica **5** 303
Field experiments:
improving with covariance analysis **3** 130
Fomes lignosus **1** 1, 2
Fungicides (*see also under* specific names):
contamination by copper **2** 106–116
contamination of scrap rubber when using **2** 109
effect of spraying on PRI **2** 108, 111
4-amino-3,5,6-trichloropicolinic acid **5** 291

Ganoderma lucidum **1** 2
Girth:
as a calibrating variate **3** 130, 135
effect of on angles of deviation of tissues **2** 93, 94
effect of plot in relation to **4** 161
increments as a measure of growth **4** 169
Girth as a Calibrating Variate for Improving Field Experiments on Hevea brasiliensis **3** 130
Gomez, J.B. **2** 91
Gorton, A.D.T. **1** 27; **5** 257
Growth:
effect of density of planting on **1** 44
Growth analysis:
leaves for sampling **3** 137
net assimilation rate for some trees **3** 144
roots for sampling **3** 137
trees for sampling **3** 137
Growth Studies in Hevea brasiliensis I. Growth Analysis up to Seven Years after Budgrafting **3** 136

Heveacrumb:
drier used for **2** 67, 68
drying characteristics of **2** 68–77
through-circulation drying of **2** 65–77
use of cuplump for **2** 66

Influence of Plot Sizes on Precision Manuring Experiments on Hevea brasiliensis **4** 161
Iyer, G.C. **4** 161

John, K.P. **1** 1
John, C.K. **4** 173; **5** 285

Kieserite **5** 218, 274
Knapsack sprayer **2** 106
Kretzschmaria cetrarioides **1** 2

Latex (*see also under* lutoids):
bacteria:
effect of actidione on growth of **5** 287
enumeration of **4** 173; **5** 285, 286
medium for isolation and cultivation of **5** 285
spreading habit of **5** 287
bacteria in **4** 201; **5** 285
bark contractions in relation to flow of **1** 40, 41
bulk pumping of **3** 153, 156
cetyl pyridinum chloride as destabiliser **4** 205
change of properties in concentrates **3** 152
changes in osmotic concentrations in **1** 25
chemicals enhancing longer flow of **5** 302, 303
choosing surfactants for **4** 205
coagulant dipping **1** 27, 28
coagulation of **4** 198, 199
collapse of vessels **1** 36
colloid system of fresh **4** 201; **5** 233
compounds **1** 28
concentrate **5** 230
contamination of field **2** 100
copper contamination of **2** 108
description of **4** 201
destabilisation:
by bacterial action **4** 195, 199
by enzymes **4** 202
by lutoid serum **4** 188, 214
destabilisation of **4** 202, 187, 205
determination of osmotic concentration of **1** 23
determination of zeta potential of hydrocarbon particle in **4** 208, 209, 210, 211, 213, 214
diagram of apparatus for titration **4** 206

dwell time **1** 33
effect of forcing fresh latex through glass capillaries **5** 236
effect of pumping on high ammonia concentrates **3** 152–160
effect of pumping on mechanical stability **3** 155, 158
effect of shear stresses on flow **5** 254, 255
effect of sodium chloride on osmotic pressure of **1** 24, 25
effect of upon osmotic concentration **1** 23
effect of viscosity **1** 33
electrostatic consideration in colloidal stability of fresh **4** 201–215
enzymes of **4** 188, 202
flow behaviour **1** 23, 36; **5** 242, 243, 248
flow studies **4** 176, 187–199, 201–215
heat sensitive dipping **1** 27
influence of aeration on concentrates of **3** 152
influence of angles of cut on vessels on yield of **2** 91, 95, 98
instruments for measuring collapse of vessels **1** 36, 37, 38
obstruction to flow of **5** 248
presence of yeasts in cultures from **4** 173
protein content of lutoid serum **4** 202, 203
pumping simulator **3** 152, 153
relationship between solids and straight dip **1** 29
rheology of **5** 236
stimulation of flow **5** 291–304
shearing effects **4** 198
straight dipping **1** 27, 28
surfactant titrations **4** 205
time of equilibration **1** 23
total solids **3** 145
use of actidione to control mould contaminants in **4** 173
use of electron microscopy to study flow **4** 176, 177
use of optical microscopy to study flow **4** 176, 177
viscosity determinations **5** 266
Latex Dipping I. Relationship Between Dwell Time, Latex Compound Viscosity and Deposit Thickness **1** 27
Latex Flow Studies I. Electron Microscopy of Hevea brasiliensis in the Region of the Tapping Cut **4** 176
Latex Flow Studies II. Influence of Lutoids on the Stability and Flow of Hevea Latex **4** 187
Latex Flow Studies III. Electrostatic Considerations in the Colloidal Stability of Fresh Hevea Latex **4** 201
Latex Flow Studies IV. Thixotropy due to Lutoids in Fresh Latex Demonstrated by a Microviscometer of New Design **5** 226
Latex Flow Studies V. Rheology of Fresh Hevea Latex Flow in Capillaries **5** 236
Latex Flow Studies VI. Effects of High Pressure Gradients on Flow of Fresh Hevea Latex in Narrow Bore Capillaries **5** 248
Leaching of Fertilisers Applied to a Latosol in Lysimeters **5** 274
Leaf:
area index **3** 141, 142, 143, 144, 145
area ratios **3** 140, 141, 142, 143, 144, 145

control of *Phytophthora* leaf fall **2** 106
disc method to estimate area **3** 137
foliage spraying **2** 107, 111
Phytophthora leaf fall **2** 111
weight **3** 140, 141, 142, 143, 144, 145
Leaf analysis **5** 218, 222, 223
Lactobacillus sp. **4** 173
Lentinus sp. **1** 2
Lenzites rependa **1** 2
Lim Sow Ching **1** 44
Local Changes in Bark Dimensions of Hevea brasiliensis Very Close to the Tapping Cut **1** 36
Lutoids:
aggregation of **4** 204, 205; **5** 230
B-serum **4** 187–199, 202, 203, 204, 205, 207, 208, 209, 211, 212, 213, 215; **5** 230, 231, 235
C-serum **4** 187–199, 201–215; **5** 230, 231
description of **4** 187
effects of breaking inside latex vessel **4** 196
influence of on stability and flow of latex **4** 187–199; **5** 250, 251, 252
influence on fresh latex **4** 201, 202; **5** 239, 240, 241, 242
mechanisms causing damage of **4** 198 **5** 248
serum as a destabiliser **4** 188, 214
thixotropy due to **5** 266
Lymexylidae **1** 2
Lysimeters **5** 274

Magnesium **5** 219, 277, 279
Manganese **5** 220, 223, 224
Mannitol solution **1** 23, 24
Manuring:
influences of plot sizes on **4** 161
statistical design for experiments on **4** 162, 164, 167
with major elements **5** 218
Mastication **3** 147, 148, 149, 150
Micrococcus sp. **4** 173; **5** 285
Mikania cordata **3** 117, 121, 122
Moghania macrophylla **3** 117, 120, 122, 127
Molybdenum **5** 219, 220, 221, 223, 224
Muriate of potash **5** 218

Nair, S. **3** 147
Narayanan, R. **2** 80; **3** 130, 147
Newsam, A. **1** 1
Ng, E.K. **2** 80
Nitrogen **5** 217, 218, 219, 222, 223

Optimum Number of Trees in Tapping Experiments on Hevea brasiliensis I. Half Spiral Alternate Daily Tapping with and without Stimulation **2** 80

Osmometers **1** 23

PA 80 rubber:
avoiding abnormalities in **5** 272, 273
cause of abnormal **5** 265–272
dispersibility of **5** 258, 261, 265
effect of excessive heating of **5** 268, 269
effect of mixing conditions on **5** 265, 269, 270
effect of production procedures on **5** 258–273
effect of storage conditions on **5** 262, 269
procedures for preparation of **5** 259, 261
properties of **5** 260
Pakianathan, S.W. **1** 23; **5** 291
Particulate natural rubber:
drying of Heveacrumb **2** 66
through-circulation drying:
advantages of **2** 65
equipment for **2** 66
procedure for **2** 66
Passalidae **1** 2
Phosphate **1** 24
Physiological Changes in Hevea Trees under Intensive Tapping **2** 100
Pillai, N.M. **2** 106; **3** 152
Pink disease **2** 106
Pinus sylvestris **3** 136, 143, 144, 145
Plant nutrients:
effect of trace elements **5** 217
nitrogen **5** 217, 218, 219, 222, 223
Planting:
determination of optimum density **1** 44
effect of density **1** 44
Plasticity Retention Index (PRI) **2** 107, 108, 110, 111
P'ng Tat Chin **2** 80
Poisoning **1** 2
Polyporus occidentalis **1** 2
Polyporus rugulosus **1** 2
Potassium **5** 278
Potassium chloride **1** 24; **5** 274, 276
Potassium cyanide **5** 219
Profit:
effect of density of planting on **1** 44
influence of yield on **1** 46
Pueraria phaseoloides **1** 2; **3** 117, 118, 119, 126

Rainfall:
monthly in Experiment Station **3** 118
Rock phosphate **5** 274, 279
Root disease (*see also under* specific names):
control of **1** 1

effect of decay of rubber wood on **1** 1–7
Root systems:
ecological relationship of cover plants **3** 126
horizontal spread of cover plants **3** 122, 123, 124
morphology of cover plants **3** 118
of *Axonopus compressus* **3** 121, 122, 126
of *Centrosema pubescens* **3** 119, 122, 126
of cover plants **3** 117–128
of *Mikania cordata* **3** 121, 122
of *Moghania macrophylla* **3** 120, 121, 127
of *Pueraria phaseoloides* **3** 118, 119, 126
of *Stylosanthes gracilis* **3** 120, 122
quantitative aspects of **3** 122
vertical penetration of cover plants **3** 122, 123
Rubber articles:
processes of latex dipping **1** 27

Schizophyllum **1** 2
Seedlings:
angle of deviation **2** 94
development of toxicity in **5** 223
effect of boron toxicity on **5** 219, 221
effect of copper on **5** 224
effect of manganese deficiency on **5** 224
effect of molybdenum on **5** 224
effect of trace elements on **5** 217
effect of zinc on **5** 224
prevention of minor element deficiencies in **5** 224
Serratia marcescens **4** 173; **5** 285
Sethu, S. **2** 65
Smallholdings:
profits on **1** 48, 49, 50
Sodium arsenite **1** 1
Sodium chloride **1** 23, 24
Soil:
analysis after leaching **5** 279
analysis before leaching **5** 274, 275
checking erosion of **3** 128
fertiliser effects on leached **5** 274
pH values bad for growing *Hevea* **5** 283
recovery of anions and cations **5** 282
Southorn, W.A. **1** 36; **4** 176, 187, 201; **5** 236, 248
SP rubber:
procedures for preparation of **5** 257, 259, 261
Sripathi Rao, B. **1** 1
Staphylococcus aureus **4** 173
Stem:
alignment of anatomical elements **2** 91–98
survey of alignment of elements

tissue alignment **2** 95, 96, 97
Stimulation of Latex Flow in Hevea brasiliensis by 4-Amino-3,5,6-Trichloropicolinic Acid and 2-Chloroethanephosphonic Acid **5** 291
Streptococcus faecalis **5** 285
Studies of Root Systems of Some Cover Plants **3** 117
Stump poisoning **1** 1, 2
Stylosanthes gracilis **3** 117, 120, 122
Sunlight degradation **3** 147, 148, 149, 150
Superphosphate **5** 218

Tapping:
effect of on flow **5** 255
incidence of dryness due to intensive **2** 103
obstruction very close to cut **1** 36
physiological changes in trees under intensive **2** 100–105
slope of cut **2** 95, 96, 97
translocation of essential compounds due to intensive **2** 105
yield responses to cut **2** 91, 98
Tapping systems:
comparison between systems, with or without stimulation **2** 80
effect of on incidence of dryness **2** 101, 103
effect of S/2.d/2.100% with and without stimulation:
on PR 107 **2** 81
on PB 80 **2** 81
on RRIM 605 **2** 81
half spiral alternate daily **2** 80
S/1.d/1.400%
S/2.d/2.100%
Templeton, J.K. **3** 136
Termite activity **1** 2
Theobroma cacao **3** 136
Through-Circulation Drying of Particulate Natural Rubber I. Heveacrumb **2** 65
Trace elements (*see also under* specific names):
effect of boron **5** 219, 220, 221, 222
effect of copper **5** 220, 221, 222, 224
effect of manganese **5** 220, 223, 224
effect of molybdenum **5** 219, 220, 221, 223, 224
effect of on seedlings **5** 217
effect of zinc **5** 220, 221, 224
type, rate and time of application **5** 219
Trametes corrugata **1** 2
Tree:
dry weight of **3** 137, 138, 139, 142, 143
for sampling growth **3** 137
growth rate of **3** 136, 139
optimum number of in tapping experiments **2** 80–90
Tree infection:
biological eradication **1** 1
Tree lace **2** 108, 109, 110, 111

Tree poisoning **1** 1, 2
Trema guineensis **3** 136, 144
Trunk spraying **2** 106, 107
Turgor pressure **5** 297, 299, 303, 307
2-chloroethanephosphonic acid **5** 291
2, 4-D **5** 291, 292, 293, 294, 295, 297, 301, 302, 303
2,4, 5-T **1** 1; **5** 291–304

Use of Actidione to Control Mould Contaminants in Hevea Latex Systems Containing Yeasts and Bacteria **4** 173

Varley, J.A. **5** 217
Viscometers **5** 226–235
Viscosity Measurements on Concentrated Natural Rubber Solutions after Mastication and Sunlight Degradation **3** 147

Wastie, R.L. **2** 106
Wycherley, P.R. **5** 291

Xanthomonas sp. **4** 173
Xylaria sp. **1** 2

Yield:
as a calibrating variate **3** 130, 134
coefficient of variation for yield and plot acreages **4** 164
covariance analysis of **2** 89
distribution pattern of single trees **2** 88
effect of different factors on **2** 80, 89
effect of planting density on **1** 44
effect of plot in relation to **4** 161
influence of on profit **1** 46
response to acetylene **5** 291, 295, 296, 304
response to bromoethane **5** 300
response to chloroform **5** 291, 301
response to ethylene oxide **5** 291, 296, 300, 302, 303
response to tapping cuts **2** 91, 98
response to picloram **5** 292, 294, 295, 300
response to various halogenoparaffins **5** 300, 301
response to 2-chloroethanephosphonic acid **5** 302
stimulation of **5** 291–304
variation due to trees and days **2** 87, 88
Yip, Esah **4** 201; **5** 236, 248

Zinc **5** 219, 220, 221, 224
Zirconium nitrate **5** 219
